**DETAILED ACTION**

1. Restriction is required under 35 U.S.C. 121 and 372.
2. Note Absent evidence to the contrary, each of the recited DNA coding for each of the recited multiple chimeric receptors is distinct since each ligand(s) to which each of said chimeric receptors is specific for is not obvious over the other set of ligand(s). Therefore, the instant claims encompass hundreds of GROUPS, not species.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

3. It is noted that the instant claims encompass DNA coding for multiple chimeric receptors consisting of numerous combinations since each receptor contains two or more extracellular domains from multiple sources, two or more transmembrane domains from multiple sources and two or more intracellular domains from two or more sources. Applicant is required to elect a DNA coding for a specific chimeric receptor containing a specified number of polypeptide chains, wherein each polypeptide chain has a specified extracellular ligand association domain, a specified transmembrane domain and a specified intracellular domain.

4. The inventions listed as Groups mentioned above, specifically claim 1, do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Gross et al (PNAS 86:10024-10028)(1989) teach DNA coding for a chimeric receptor containing two or more independent polypeptide chains comprising in a N to C terminus sequence: an extracellular

ligand association domain, a transmembrane domain and one or more intracellular domains, wherein at least two of said domains in one chain are not naturally fused to each other, see entire article, especially the Abstract and the Introduction.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
